## **PRODUCT STATEMENT**

To Whom It May Concern,

WHEAT-CHEK is a bran enzyme activity test kit containing reagent buffers and a proprietary chromogenic substrate solution. The buffers and substrate solution (an acetone mixture) are 100% synthetic. The reagent concentrations are at physiological levels for the enzymes being tested. However, we urge you to use appropriate caution as you would with any other laboratory solvents and reagents.

Any Reagent or Reagent mixtures and spent or inactive solutions may be disposed of safely through dilution via a normal septic system. Shelf-life of the reagents vary according to storage conditions and test kit reagent activity can be checked against raw whole wheat that are bran active. All WHEAT-CHEK components are biodegradable.

Reagent 1 of WHEAT-CHEK contains acetone.

The information above is believed to be correct and to represent accurately the best available technical knowledge.

We assume no liability for the misuse of WHEAT-CHEK nor imply any additional warranty beyond its use as a rapid test solution for bran activity determinations.

Respectfully,

LSB PRODUCTS  
A Div. of ALTECA LTD.
