MATERIAL SAFETY DATA INFORMATION

Dear WHEAT-CHEK User:

WHEAT-CHEK is a bran enzyme activity test kit containing reagent buffers and a proprietary chromogenic substrate solution. The buffers and substrate solution (an acetone mixture) contain no components that require Material Safety Data Sheets. The reagent concentrations are at physiological levels for the enzymes being tested. However, we urge you to use appropriate caution as you would with any other laboratory solvents and reagents.

DO NOT DRINK. KEEP AWAY FROM CHILDREN.

WHEAT-CHEK spills may be wiped up with paper towels or tissues and surfaces, including skin, washed with detergent and rinsed well with water. Eyes should be rinsed immediately with clean water and, if irritated, treated with any gentle, over-the-counter-type eye rinse solution. Eye protection is recommended when using WHEAT-CHEK solutions or any other laboratory reagents.

Any Reagent or Reagent mixtures and spent or inactive solutions may be disposed of safely through dilution via a normal septic system. Shelf-life of the reagents vary according to storage conditions. All WHEAT-CHEK components are biodegradable.

The information above is believed to be correct and to represent accurately the best available technical knowledge.

We assume no liability for the misuse of WHEAT-CHEK nor imply any additional warranty beyond its use as a rapid test solution for bran activity determinations.

Respectfully,
